

ROTATEK

SU ARITMA SİSTEMLERİ

ROTATEK Arıtma ve Çevre Teknolojileri San. Tic. Ltd. Şti.

realizes, on every scale, the services of design, manufacturing, commitment and post-sale support for commercial and industrial water treatment systems.

ROTATEK, with its studies, aims at rarefying the quality and efficiency of manufacturing in industry by enabling the quality of drinking water, which is one of the most vital needs go human being and the process water that is necessary for industry.

ROTATEK takes maximum care for key points for each kinds of activity.

- to accommodate the customer with right detection of the need and optimum engineering solution
- to enable the system that will be installed to be easy to operate and control
- to continue a close relationship with the customer through the post-sale technique service support
- to enable the customer with the most suitable technology, equipment and service support, without falling for commercial concern
- to train the customer representative best
- to enable documentation support for the combined design
- delivery on time

ROTATEK finds sectoral specific engineering solution in regards with the preparing the process water that industrial plants such as food, soft drink, textile, cosmetics, chemicals, electronics, energy, chemistry, automotive etc need .

ROTATEK realizes specific treatment systems, design, manufacturing and assembling commitments for Domestic/ Commercial and Industrial (chemicals, food, soft drink, textile, electronics etc.) sectors.

As **ROTATEK**, we have been making efforts in order to do better and to define high standards both for ourselves and for the products we manufacture for our customers. We have been working to reach for the best product and service quality. Not letting it go like that, we have been searching for the methods that will carry us to the best.

ROTATEK QUALITY POLICY

- **ROTATEK**'s quality target is to complete its commitments as soon as possible in this competitive market conditions and with optimum cost; to meet the expectations of employer in full force; and to carry the services that are furnished to the customer to the highest quality.
- To present the customer with the exact and correct system with the most suitable price, avoiding all commercial concern in its activities.
- Always to be fair and honest to its state, business partners, customers and personnel.
- **ROTATEK** is aware of the fact that continuity of quality is possible only when the changing and developing customer expectation is exactly and correctly determined and met. Therefore **ROTATEK** always gives importance to the activities of engineering and business development.
- At all stages of engineering services, it is one of the indispensable principles for **ROTATEK** to wholly comply with quality, hygiene, environment and safety rules.
- The main principle that is paid attention for all activities from purchasing to post-sale is to do the right and to increase the competitive power of the company with constant development. For this purpose, **ROTATEK** diligently chooses its material provider and makes effort to carry the strategic relationship it established with them towards better. **ROTATEK** detects critical points during design and commitment and takes precautions in order to prevent defects and inconvenience, and enables continuity in quality with effective and corrective activities for possible problems. It follows technological advances and reflects contemporary applications to service quality.
- **ROTATEK** trains its employees, whom it sees as the most precious resource in terms of constant development in accordance with the advancing technology so that service meeting the expectations of employees on top level is presented in the most effective way.
- To put team spirit into the core. To share profit/loss, success/failure with all personnel and to enable high motivation.

Application Areas

Containerized water treatment systems are mobile systems densely preferred generally on remote areas and outdoor applications. Containerized systems are manufactured completely installed ready to start compact systems with 20 ft or 40 ft ISO containers. Different type of water treatment processes may be used depending on raw water source and required product water quality.

20 ft ISO containerized water treatment system – Inside View

Standard Specifications

- ◆ 20 ft ve 40 ft ISO container
- ◆ Equipment fixing fully comply with sea worthy and land shipping
- ◆ Labelling comply with international transportation
- ◆ Corrosion resistant epoxy painted
- ◆ Internal installation of all equipments
- ◆ Indoor lighting
- ◆ Service door
- ◆ CSC certificated

40 ft ISO containerized water treatment system – Outside View

Optional Specifications

- ◆ Sandwich panel heat insulation
- ◆ A/C conditioner
- ◆ Louvered service door
- ◆ Investigation report

Performance and Function Tests

All performance and function tests are done before shipping the system to the customer.

Investigation Report (Optional)

In case of need, containerized water treatment systems are investigated and certificated by a third party investigation company (i.e. SGS, BV) Investigation includes below check & control stages.

- ◆ Manufacturing specifications conformity audit
- ◆ Visual quality controls of water treatment units
- ◆ Supervision during performance test
- ◆ Critical design controls
- ◆ Quantity controls
- ◆ Marking controls
- ◆ Visual quality controls
- ◆ Product photographing

40 ft ISO containerized water treatment system – Inside View

Standard Technical Specifications

- ◆ FRP mineral tank body
- ◆ Top mount automatic control valve
- ◆ Timer controlled automatic backwash
- ◆ Backwash flowrate inhibitor
- ◆ 220 V/50 Hz energy inlet
- ◆ Bottom collector difuser

Optional Specifications

- ◆ Backwash with differential pressure switch
- ◆ Inlet and outlet sample valves
- ◆ Inlet and outlet pressure gauges
- ◆ Dublex (twin tank) system
- ◆ Vacuum breaker

Working Conditions

- ◆ Working pressure: 2 – 6 bar
- ◆ Energy feed: 220 V/50 Hz
- ◆ Working temperature: 5 – 45 °C

Function

Multi cartridge filtration units are used to remove particulates, sediments in water and contains polypropylene filter cartridges 10", 20", 30", 40" in size with 1 μ - 5 μ - 10 μ - 25 μ filtration precision. Filter cartridges are absolute filters and renewed when clogged.

Filter vessels can be manufactured with stainless steel or PVC material. The advantage of multicartridge filtration units is very good and absolute filtration performance in high flowrates. The capacity of the filtration units can be increased by using more cartridges in the filter vessels.

Standard Technical Specifications

- ◆ Epoxy coated carbon steel chassis
- ◆ TFC 2,5" / 4" spiral wounded membranes
- ◆ 5 µ sediment filter
- ◆ Rotary type high pressure pump (R 251 – 402)
- ◆ Centrifugal type Dikey high pressure pump (R 403 – 4015)
- ◆ 220 V/1 faz/50 Hz (R 251 – 402)
- ◆ 380 V/3 faz/50 Hz (R 403 – 4015)
- ◆ FRP membrane vessels
- ◆ TDS / Conductivity analyser
- ◆ Low pressure piping U-PVC Zonder / PP
- ◆ High pressure piping U-PVC Zonder / PP
- ◆ Low & high pressure switches
- ◆ Membrane inlet pressure regulator valve
- ◆ Concentrate wastewater flow regulation valve
- ◆ Permeate and concentrate flowmeters
- ◆ Recirculation flowmeters (R 251 – 403)
- ◆ Inlet solenoid valve
- ◆ Automatic flush system
- ◆ Pressure gauges
- ◆ Microprocessor control panel

R 404 Reverse Osmosis Unit

Optional Specifications

- ◆ AISI 304 Stainless steel chassis
- ◆ Stainless steel membrane vessels
- ◆ AISI 304/316 stainless steel high pressure piping
- ◆ PLC control panel
- ◆ Touch screen panel
- ◆ Electric actuated inlet valve
- ◆ Wooden casing with pallette
- ◆ Complete plant with chassis (with pretreatment units)

- ◆ Energy feed: 220 V/50 Hz
- ◆ Operating temperature: 2 – 38 °C

Cabinet type softeners

Applications

Cabinet type water softeners are generally used to prevent lime deposits in the machines such as dishwashers, laundries, water heaters, humidifiers, boilers in household and domestic applications.

Operation

Cabinet type water softeners are controlled with multiway automation valves. The exhausted resin is regenerated with brine solution. Regeneration control can be achieved with timer or flow controller. The brine solution needed during regeneration is drawn from the reserve in the brine tank.

- ◆ Top mount automation control valve
- ◆ Flow controlled regeneration
- ◆ Collector diffuser
- ◆ Cationic water softener resin

How it Works?

Both resin tanks are controlled with multiway top mount automation control valves. Dublex systems have two resin tanks which one tank is in service and the other tank is in regeneration or waiting service. Dublex water softeners can soften the water 24 hours a day without any interruption.

Operating Conditions

- ◆ Working pressure: 2 – 6 bar

Technical Specifications

- ◆ AISI 304 stainless steel body
- ◆ 9000 hours lamp life
- ◆ Firstlight lamp
- ◆ Timer (*UVS serie*)
- ◆ Lamp failure indicator (*UVS serie*)
- ◆ Audio alarm (*UVS serie*)
- ◆ Alarm relay outlet (*UVS serie*)

Optional Specifications

- ◆ AISI 316 stainless steel body
- ◆ 16 bar pressure resistant body
- ◆ UV dosage sensor
- ◆ Reactor heat sensor
- ◆ Flow sensor
- ◆ Manual or automatic quartz glass cleaning mechanism
- ◆ UV sensor with ÖNORM or DVGW standards

Operating Conditions

- ◆ Max. operating pressure: 8 bar
- ◆ Energy feed: 220 V/1 faz/50 Hz
- ◆ Operating temperature: 2 – 40 °C

Ultraviolet Disinfection Systems

ULTRAVIOLET DISINFECTION SYSTEMS TECHNICAL SPECIFICATIONS

Model	Max. Flowrate (m3/hour)	Energy (Watt)	Lamp Qty (nos)	Dimension (cm)	Connection
UV 30	0,1	6	1	5 x 27 x 7	¼" threaded
UV 50	0,3	14	1	7 x 35 x 7	½" threaded
